EDUCATION

The University of Texas at Austin, Austin, TX
Bachelor of Computer Science

August 2026

Relevant Coursework: Cloud Computing, Cloud Native Computing, Data Structures, Software Engineering, Data management

SKILLS

Technical Skills: Java, JavaScript, C++, Python, C, SQL, Swift

Frameworks and Libraries: Kubernetes, Google Cloud Platform, Docker, Helm, Prometheus, React, D3.js, node.js, SwiftUI

Tools: Linux, Git, MySQL

Languages: Basic Spanish, Native English

PROJECTS

Neurodex - JavaScript, Google Cloud Platform, Docker

June 2025

- Developed a React frontend and Flask backend to visualize and interact with AI dataset APIs
- Built Interactive D3.js visualizations for API-driven data exploration
- Containerized application components and deployed to Google Cloud

Duelist – Firebase, Swift, SwiftUI,

June 2025

- Developed an app that connected to another through local connections to play a sword dueling game.
- Used I-Phone motion controls to get target data
- Built a database for users to join and save their data

Kubernetes Project - Kubernetes, Google Cloud Platform, Python, Docker

June 2026

- Deployed a containerized application to Google Cloud using Kubernetes and Helm
- Created Helm configuration to automate application deployment and service configuration
- Implemented Prometheus monitoring to collect and expose application metrics
- Developed Python components to process and serve application data

Interactive Chat Archive - React, Vite, JavaScript, Python

August 2026

- Built a React/Vite application for displaying preprocessed Discord conversations as an interactive book-style interface
- Developed a Python/Pandas preprocessing pipeline to clean, filter, and organize 40,000+ messages

LEADERSHIP & COMMUNITY INVOLVEMENT

UT IGVC Team, Austin, Texas

January 2023 - May 2025

Lead

- Led a multidisciplinary team developing an autonomous ground vehicle for the Intelligent Ground Vehicle Competition
- Developed and integrated software using C, C++, Python, and ROS for autonomous navigation and vehicle systems
- Integrated LiDAR, IMU, and depth-camera sensors into the autonomous vehicle platform
- Coordinated software and hardware development across team members and established development responsibilities to improve project execution
